SAFETY DATA SHEET — DEMO FIXTURE

SYNTHETIC TEST DATA ONLY — NOT AN AUTHENTIC SDS — NOT FOR REAL HANDLING, OPERATIONS, COMPLIANCE, OR SAFETY DECISIONS

Product: AquaClean-7 Demo Process Fluid (fictional mixture)

Demo supplier: SafeFlow Test Laboratory (fictional) **Revision:** 1.0 **Date:** 27 October 2026

Demo identifier: SF-SDS-DEMO-007 **CAS number:** Not applicable — fictional mixture

Purpose: This document is intentionally authored as a parser test fixture. Values below are invented to test field extraction, source-section mapping, missing-data handling, and human-review workflow. They do not describe a real chemical.

Section 1 — Identification

Product name: AquaClean-7 Demo Process Fluid. **Recommended use:** synthetic process-fluid example for software testing only. **Restrictions:** do not manufacture, handle, or use this fictional product.

Section 2 — Hazard Identification

Fictional classification for parser testing: Corrosive to metals, Category 1; Acute toxicity (inhalation), Category 4; Serious eye damage, Category 1. Signal word: Danger. These classifications are invented test values and are not a real hazard assessment.

Section 3 — Composition / Information on Ingredients

Fictional formulation: Component A, 12% by mass; Component B, 8% by mass; water, 80% by mass. Components A and B are placeholders and do not correspond to real substances. No real CAS numbers are assigned.

Section 4 — First-Aid Measures

Synthetic test text only: inhalation may cause respiratory irritation; eye contact may cause severe irritation. This section is not a first-aid instruction and must not be used for a real exposure.

Section 5 — Fire-Fighting Measures

Synthetic test text only: product is designated non-flammable in this fictional example. Thermal decomposition data are provided in Section 10 solely to test extraction.

Section 6 — Accidental Release Measures

No operational spill procedure is provided because this is not a real product. Do not use this document for emergency response.

Section 7 — Handling and Storage

No real handling or storage instructions are provided. This synthetic document must not be used as a basis for operating a process.

Section 8 — Exposure Controls / Personal Protection

Permissible exposure limits (fictional parser-test values): Demo Authority PEL: 10 ppm (8-hour TWA); Demo Hygiene TLV: 5 ppm (8-hour TWA), 10 ppm STEL; Demo Institute REL: 5 ppm TWA, 10 ppm STEL; fictional IDLH: 50 ppm. These are invented values and are not occupational exposure limits.

Section 9 — Physical and Chemical Properties

Physical data (fictional parser-test values): Appearance: pale blue liquid; odor: mild citrus-like; pH: 11.2 at 20°C; initial boiling point: 104°C; melting/freezing point: –2°C; vapor pressure: 2.1 kPa at 20°C; relative density: 1.08 at 20°C; vapor density: 1.2 (air = 1); flash point: not applicable in this fictional non-flammable example; solubility in water: miscible.

Section 10 — Stability and Reactivity

Reactivity data (fictional): May react with strong acids and strong oxidizing agents. Avoid mixing with concentrated acids. This is an invented compatibility statement for testing only.

Thermal and chemical stability data (fictional): Stable under the fictional recommended storage conditions. Decomposition is stated to begin above 180°C, producing irritating vapors. The temperature and products are invented test values, not real safety information.

Hazardous effects of inadvertent mixing (fictional): Mixing with concentrated acid is stated to generate heat and irritating vapor; mixing with the fictional oxidizer Component B concentrate is stated to cause rapid gas evolution. These statements are invented parser-test content and must not be treated as real incompatibility data.

Section 11 — Toxicological Information

Toxicity information (fictional): Acute inhalation toxicity estimate: LC50 (4-hour, rat) = 1,500 ppm. May cause respiratory irritation in this fictional test description. This number is invented and is not a measured or validated toxicological value.

Section 12 — Ecological Information

No real ecological data available. This section is intentionally incomplete.

Section 13 — Disposal Considerations

No disposal recommendation is provided for this fictional product.

Section 14 — Transport Information

No real transport classification is assigned.

Section 15 — Regulatory Information

This synthetic fixture is not a regulatory SDS and does not establish compliance with any jurisdiction's requirements.

Section 16 — Other Information

Prepared solely to test document ingestion and PSI field mapping in SafeFlow. All chemical identities, classifications, limits, numerical values, incompatibilities, and decomposition statements are fictional. Treat every extracted field as unverified until replaced with authoritative real-source data and reviewed by a qualified person.
